

Leonardo Sánchez

Senior Frontend Engineer | React & Next.js | AI-Assisted Development

Berlin, Germany | +49 179 1557641

leonardosanchez4h@hotmail.com | [LinkedIn](#) | [Portfolio](#)

Profile

Senior Software Engineer with 7+ years of experience specializing in React, Next.js, and TypeScript. Daily practitioner of AI-assisted development workflows (Cursor, Claude Code, GitHub Copilot, Codex) across the full delivery cycle — from Jira ticket breakdown to PR review and test generation. Strong focus on *senior judgement* on when to accept, edit, or reject AI-generated code. Currently pursuing an M.Sc. in AI to deepen the integration between high-performance web interfaces and Generative AI, while building autonomous LLM-powered tools (LangGraph, Claude Sonnet) on the side.

Technical Skills

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, React Native.

AI-Assisted Development: Cursor, Claude Code, GitHub Copilot, OpenAI Codex, Claude/ChatGPT for code review. Prompt engineering for code generation, refactoring, and test scaffolding.

LLM & AI Engineering: LangChain, LangGraph, multi-agent systems, OpenAI/Anthropic APIs, tool-calling, RAG pipelines.

Architecture: Design Systems, Component-Driven Development, State Management (Redux, Zustand).

Testing & QA: Jest, Cypress, Playwright, Vitest. AI-assisted test generation and self-review of PRs.

Backend: Node.js, Python, GraphQL, REST APIs.

Cloud & Security: Azure (AZ-900), Docker, CI/CD, Cybersecurity Fundamentals (Master's level).

Tools: Git, GitHub Actions, Jira, Agile/Scrum.

Professional Experience

Senior Frontend Web Developer | Libélula Soft | Remote

Nov 2023 – Present

- Led the frontend architecture for a financial services platform using React and Next.js, ensuring compliance with regulated data standards.
- Integrated AI-assisted development tools (Cursor, Claude Code, Codex, GitHub Copilot) into the daily delivery workflow: Jira ticket breakdown, feature scaffolding, PR review, and automated test generation.
- Established team practices for prompt engineering and AI code review, including criteria for accepting, editing, or rejecting AI-generated suggestions to preserve codebase consistency.
- Optimized form-driven workflows with React Hook Form and Zod, reducing user entry errors by 30%.
- Reduced production regressions by 50% through a comprehensive E2E testing suite with Playwright and Cypress, with AI-generated test scaffolding accelerating coverage growth.
- Standardized a reusable UI library with Tailwind CSS, accelerating delivery of new features by 25%.

Senior Full Stack Engineer | Pickatale | Remote (Norway)

Mar 2023 – Oct 2023

- Engineered modular components for an EdTech platform serving thousands of international users.
- Improved frontend rendering performance by 40% using Next.js server-side optimization techniques.
- Developed serverless backend workflows using Azure Functions and Node.js for media content delivery.

Full Stack Software Engineer | Kruger | Ecuador

Jun 2022 – Feb 2023

- Built enterprise ERP solutions for HR and asset management using React and Node.js microservices.
- Implemented secure MongoDB environments for business-critical workflows across multiple countries.

- Delivered a multi-tenant dashboard consolidating data from 5+ internal systems, reducing manual reporting time by 35%.

Full Stack Software Engineer | Jalasoft | Remote

Aug 2021 – May 2022

- Developed a technical assessment platform for large-scale candidate evaluation used by 20+ enterprise clients.
- Designed complex UI workflows and video-interview features using React and Node.js.
- Improved test submission latency by 45% through API caching strategies and query optimization.

Key Projects

Autonomous Job Application Agent (Python / LangGraph / Playwright / Claude Sonnet)

2026

- Designed a 7-module multi-agent system using LangGraph for orchestration and Claude Sonnet as the reasoning LLM, automating end-to-end job applications across major German job platforms (LinkedIn, Xing, StepStone, Indeed DE).
- Implemented browser-based automation with Playwright, Postgres-backed state management, and a Next.js dashboard for monitoring agent runs.
- Hands-on with prompt engineering, tool-calling, and agent evaluation loops at the API level (not just IDE-level consumption).

AI-Powered Code Review Assistant (Next.js / OpenAI API / GitHub Actions)

2025

- Built a GitHub Actions workflow that triggers an LLM-based code review on every pull request, providing structured feedback on complexity, security risks, and style.
- Reduced manual review overhead by approximately 40% in a team of 6 engineers during internal testing.
- Authored prompt templates calibrated to surface real issues while filtering low-signal suggestions.

Real-Time Finance Dashboard (React / WebSockets / Node.js)

2024

- Architected a real-time financial data dashboard with live chart updates via WebSockets, role-based access control, and audit logging.
- Deployed on Azure with a CI/CD pipeline achieving zero-downtime releases; open-sourced and starred 180+ times on GitHub.

Education

M.Sc. in Artificial Intelligence

Expected 2027

GISMA University of Applied Sciences, Germany

M.Sc. in Cybersecurity (Seguridad Informática)

Graduated 2026

Universidad Tecnológica Israel, Ecuador

Bachelor's Degree in Software Engineering

Graduated 2022

Universidad Tecnológica Israel, Ecuador

Certifications & Languages

Certifications: Microsoft Azure Fundamentals (AZ-900), Andela React Program (Meta).

Languages: Spanish (Native), English (Professional – C1), German (A1 – actively learning).
